## Retractable Gear Attachment Systems

First engineered for SCUBA diving, the Gear Keeper is a rugged, retractable gear attachment system, designed to utilize and protect gear in **severe environments with maximum break strength and durability.**

The Gear Keeper is at the core of an extensive product line that boasts an impressive array of benefits and features: a **patented flushing system** that clears sand and debris from the unit, is **salt-water proof**, and will withstand **high-temperature environments**; a **patented Q/C Connector System** that provides quick and easy connection/disconnection of gear.

The RT2 Series features **27 Kg (60#) break-strength**, stainless steel nylon coated cable and a high impact housing. The RT3 Series features **36 Kg (80#) break strength**, Spectra/Nylon line, and a high-impact housing. The New RT4 Series features **27 Kg (60#) break-strength**, extremely durable Spectra/Nylon line and a new Mid-Force which bridges the gap between the RT2 and RT3 Series for any gear you need to keep handy and can't afford to lose (Lapel Mics, Flashlights, Knives/Seat-Belt Cutters...).

**Speciality product packages** combine the proper retraction force, attachment accessories and mounting options for specific applications or you can choose whatever force, mounting option, end type to create your own combination.

The original **Mic Keeper®** revolutionized communications for firefighters by making the lapel mic easy to use while avoiding the constant nuisance of having your mic drag on the ground or be inaccessible.

The innovative **Add-A-Clip®** product line gives the firefighter the ability to easily customize the turnout gear attachment points, eliminating the need for special sewn-on alterations.

**Grab your gear, use it, let it go —  
it retracts back every time!**

Gear Keeper makes whatever you're doing easier while preventing loss or damage to your valuable gear.
